Technical Specification:

1. Roller Tube - 100mm diameter steel tube.

2. Motor - tubular gearmotor positioned on the right side as standard, left side optional.

3. Mounting Brackets - steel, suitable for wall or ceiling fixing.

4. Roller Idle Assembly - zinc-plated steel shaft supported by roller bearings in an aluminium housing.

5. Endcaps - complete with adaptor roller bracket, compatible with fascia and headbox, available in clear anodized (standard) or black, white, ivory or bronze powder-coat finish.

6. Fascia - 163mm x 163mm curved or square cover of extruded aluminium, available in clear anodized (standard) or black, white, ivory or bronze powder-coat finish.

7. Headbox - 168mm x 168mm curved or square fascia and L-shaped back/top cover of extruded aluminium, available in clear anodized (standard) or black, white, ivory or bronze powder-coat finish.

8. Pocket Headbox - extruded aluminium with removable bottom closure panel for easy access to roller and drive unit. Aluminium endplates with integrated steel brackets secured to headbox.

9. Bottom Hem Pocket - 54mm heat sealed bottom hem pocket with 3.2mm x 25.4mm aluminium slat. Pocket ends are heat sealed so slat bar cannot be easily removed.

10. Shade Fabric - BAB Projects uses fabrics from leading textile mills. Unmatched style and colour choices. We also offer PVC-free and recyclable fabrics. Fire retardancy and antimicrobial documentation and testing reports are available.

Squared fascia

Case study:

LOCATION: Seven World Trade Center

DRAPER PRODUCTS USED: Manual and Motorised Window Shades with Phifer SW2700

CERTIFICATION LEVEL: Gold

Seven World Trade Center is the first building to be rebuilt at the 9/11 site in New York City. It was also the 1st to receive LEED Gold Certification. Seven World Trade Center has Draper manual and motorised window shades. 7 World Trade Center was designed by David M. Childs. The building has a daylight dimming system in the ceilings that adjusts to the amount of available sunlight. The cost of greening this World Trade Center project added less than 5 percent to its budget.

ABOUT DRAPER: Draper offers lines of window shades for the commercial, educational, and residential markets, and is one of the country's largest manufacturers of window shades. Draper utilises a state-of-the-art 400,000 square foot manufacturing facility. Draper offers unmatched customer service and support and has continued to expand and grow its product lines through the recent recession and slow economy. Draper's in-house engineering department designs our own product components, including clutches, roller tubes, and window shade hardware.

RESPONSIBILITY TO OUR ENVIRONMENT: Draper is looking forward to the needs of the future by establishing itself as a market leader in "Green" environmentally-friendly products and operations.

GREEN PRODUCTS: Draper products can improve a building's energy efficiency. Window shades reflect light and heat from the sun, reducing the amount of energy required to cool the building. Motorised window shades can automatically adjust to compensate for the changing shade requirements throughout the day. Shades support healthy day-lighting while reducing or eliminating uncomfortable glare for workers.

“ Draper has appointed BAB Projects as its sales and stockist partner for our range of FlexShade products to the UK commercial specification and construction sectors.
Brian Cassley, European Sales Manager - Draper Inc.
